CSA/GM Logic Model

Context
External environmental factors. This includes assumptions i.e., expectations or beliefs that underpin intervention success

Interventions
What activities are delivered to beneficiaries

Mechanisms
by which the activities lead to the outcomes. This might include changes in attitudes, thinking or behaviour

Outcomes
The changes you expect or hope to see because of the intervention

Contextual factor 1:

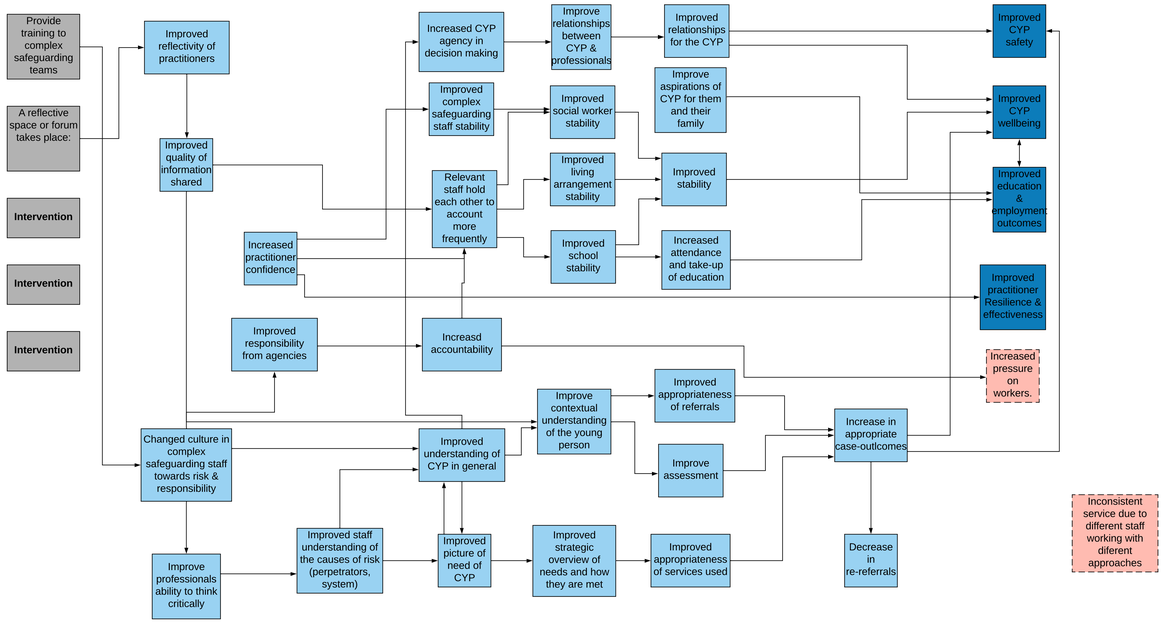
Approach:
Responsibility focused on the agency, not the young person

7 Principles from the Centre - including - anyone who is employed by a complex safeguarding team has to have a minimum standard of training

Model needs to be culutrally competent, and meet the needs based on variety of demograhpics (ethinicty, gender, age - including adolescent development etc..)

The intervention must focus on doing with, not doing to.

Move away from victim blaming (safety isn't the responsibility of the YP)

Ensure it's adapted to fit local context.


Other reflections:
What does wellbeing mean? How do we test it.
